Title: Fox News Poll

Survey sponsor: Fox News

Survey Firm: Beacon Research / Shaw & Co Research

Interviewing Dates: April 4-7, 2020

Interviewing provided by: Braun Research, Inc. of Princeton, NJ

Sample Size: 1107 (281 Landline / 826 Cell [Unweighted], 239 Landline / 868 Cell [Weighted]

Weighting: Age, ethnicity, education, gender, urban/rural/other (Weighting variable name= "weight")

Phone Methodology:

Braun Research uses a probability landline sample combined with a cell
phone frame allowing 97% of the US population an opportunity to be
selected.   We execute the survey with a 6 call design (2 calls
maximum per night) over three nights. All interviews are completed
using CATI technology with live interviewers.   We use a method of
selection asking for the youngest male/youngest female available at
the time of the call.   All calls are monitored during interviewing
and verifications are completed over the next 2 nights after
completion.

Estimated size of the noncovered population: 2.7% of HHs (per CDC
wireless substitution data)

Fox News Poll Methodology Statement
April 2019

The Fox News Poll is directed by Beacon Research (D) (formerly named Anderson RobbinsResearch) and Shaw & Company Research (R). The poll is conducted via telephone among a nationally representative sample of approximately 1,000 registered voters. Of the completed interviews, roughly 25 percent are conducted with respondents on landlines and 75 percent with respondents on cellphones.

Sampling
The Fox News Poll uses a dual-frame sample design encompassing landline and cellphones. Both the sample components are designed using a probability proportionate to size method, which means phone numbers for each state are proportional to the number of voters in each state. The landline sample is developed using random digit dial procedures (RDD), in which all landline numbers (listed and unlisted) in the continental United States have an equal probability of being selected. The cellphone sample is also identified using a probability selection method which involves: (1) identifying blocks of telephone numbers that are exclusively cellphones; and (2) randomly generating the last two digits and then dialing these numbers within the block. In addition, all respondents are screened to ensure they are registered to vote. In states without registration or same-day registration, respondents are asked about the regularity of their voting behavior. Before elections, interviewers sometimes screen for "likely voters" through a series of questions about past voting behavior, vote likelihood, and/or interest in the current election. Quotas are applied to ensure the sample mirrors the proportions of voters nationally. Specifically, gender (53 percent female, 47 percent male) and regional quotas are employed.

Interviewing
All interviews for the Fox News Poll are conducted by live interviewers. Furthermore, interviews are conducted by trained professionals from central, monitored locations. Interviews are conducted through a computer-assisted telephone interviewing (CATI) system, and both human supervisors and software monitor each step of the interviewing process. Dialing is structured such that prospective respondents always find a live interviewer when they answer their phone. On average, six calls are placed to each unanswered number during the three-day period when the poll is fielded. Cellphone respondents are screened to ensure they are not driving or participating in an activity that requires their full attention.

Weighting
When necessary, minor weights are used to ensure the demographics of survey respondents are representative of the national registered voter population. Generally, weights are only applied to age, race, education, and area variables. The Fox News Poll is not weighted by political party.

Accuracy
For a sample of about 1,000 interviews, the error due to sampling is plus or minus 3.1 percentage points at the 95 percent confidence level. For example, when the survey says "47 percent of voters…" then the probability is very high that no less than 44 percent and no more than 50 percent of all voters would have responded the same way. Sampling error associated with subgroup results is higher.

In addition to sampling error, question wording and question order can influence results.

Landline Intro
Hello, I am ___ calling for BR Interviewing. We are conducting an important national survey about some things that have been in the news. We are not selling anything. All your answers will be kept confidential.

I'd like to ask a few questions of the YOUNGEST MALE, 18 years of age or older, who is now at home?

IF NO MALE, ASK: May I please speak with the YOUNGEST FEMALE, 18 years of age or older, who is now at home?

MUST READ: This call may be monitored for quality control and training purposes.

Cell Intro
Hello, I am ___ calling for BR Interviewing. We are conducting an important national survey about some things that have been in the news. I know I am calling you on a cell phone. This is not a sales call.

IF R SAYS DRIVING/UNABLE TO TAKE CALL: Thank you. We will try you another time.

MUST READ: This call may be monitored for quality control and training purposes.

We're interested in learning more about people with cell phones. If you are now driving a car or doing any activity requiring your full attention, I need to call you back later.
